

## Kore.ai Bots for SAP HR/HCM

### Meet Your 24/7 Digital Assistant

#### AI-rich bots designed to instantly perform the most cumbersome HR/HCM tasks

The Kore.ai Bots for SAP HR/HCM give enterprises back time and money by bringing the power of AI-rich chatbots to human resources and human capital management processes.

Using natural language and an easy-to-use conversational interface, employees can quickly request and manage PTO requests and get update alerts, log and manage timesheets, manage shifts, get employee details, hierarchies, or employee lists by location, and give badges – from the convenience of their fingertips or voice via channels such as web, mobile, SMS, and more. With this smart companion, getting tasks done is as fast as sending a text or speaking a command.

#### Simpler, Faster, More Humanlike Access

**Engage more naturally:** Turn repetitive requests and updates into natural interactions by letting employees engage how they typically communicate—via voice and text.

**Put employees in control:** Eliminate frustrating back-and-forth wait times and complicated admin tasks by letting employees instantly submit and track requests anytime, anywhere.

**Modernize your delivery:** Let employees connect from today's popular communication channels, and get more from your enterprise system investments already in place.

With Kore.ai Bots for SAP HR/HCM, enterprises gain an advantage of freeing employees from time-consuming administrative tasks to focus on meaningful work, not toggling between systems and screens.

### Natural language ease

Traditional systems require users to log in and understand how to work with each application – where to click, what fields to enter, what actions to take, and what to do next. Natural language interfaces let users create and manage everyday HR tasks using a familiar, conversational approach.

### Multi-channel flexibility and conversation history

Users can break free of system requirements by performing tasks from the channel of their choice. They can even start in one channel and resume in another without starting over.

### Smart technology

When it comes to user experience, one size doesn't fit all. With intelligence built in, you can now offer 1:1 personalized experiences using modern technology that seeks to understand and complete tasks faster.

### Actionable, simple response options

Equip users to never skip a beat or miss an update with on-the-go alerts, which they can take action from instantly – wherever they are.

#### Put Intelligent Chatbots to Work for Your Employees to:

- ✓ Get available PTO
- ✓ Request PTO
- ✓ Approve/deny PTO requests
- ✓ Get employee lists by location
- ✓ Get employee details
- ✓ Give badges
- ✓ Get PTO notifications for request updates

### SAP-Certified Kore.ai Bots Platform

Kore.ai provides the only SAP-certified bots platform for companies across all industries to access cutting-edge, smart technology to build and deploy chatbots, via out-of-the-box and fully customizable options.

Our enterprise-grade, end-to-end Bots Platform offers flexibility for businesses to use our pre-built bots or build their own, once, and simply optimize across multiple communication channels such as web, mobile, SMS, email,

Skype, Spark, Fiori apps, messaging clients, and other social platforms.

The Kore.ai Bots Platform contains all necessary enterprise-class components, including the Kore.ai Bot Builder, award-winning natural language processing engine, machine learning, intelligence, middleware, robust security controls, analytics, and admin console—to satisfy cloud or on-premise requirements.
